## MISSOURIAN 2 6 1993 HOMEOWNER INSURANCE REPORT

1991

MISSOURI DEPARTMENT OF INSURANCE STATISTICAL SECTION

December 1992

### EXECUTIVE SUMMARY

Homeowner insurers and other personal lines insurers are part of a vast industry undergoing a challenging, transitional period. With recent consumer legislation in several states this industry is continuously being asked to provide justification for its' financial condition, market conduct and rating actions. Although each individual company can adequately explain its' own actions and corresponding results, only a central agency can accumulate this information for an entire industry.

The Missouri Department of Insurance has assembled the following review of the homeowner insurance industry in Missouri. This report is not intended to either support or discredit the industry's actions. It is merely to serve as an informational tool that contains summary data.

The Missouri Department of Insurance has reviewed this report carefully. When peculiarities were found in the data, we researched further for possible reasons. Much of the information this report comes from the zip code data submitted to the Department by each company. Approximately 95% of the companies are included in this report. The only exclusion is if a company or group of companies writes less than 500 exposures. The accuracy of this report is very much dependent on the accuracy of the companies filing the data.

Please take into consideration that this report is not an all inclusive study of rating practices and that any conclusion drawn from this data must be researched and analyzed. Inferences should not be made by concentrating on one element of this report. A comprehensive review of the entire report and adequate knowledge of the homeowner insurance industry are prerequisites for adequate analysis.

Many underlying factors that are not included in this report contribute to the costs of homeowner insurance. Rising costs in the areas of building materials, building repair, home prices and legal services contribute substantially to the cost of homeowner insurance.

The Missouri Department of Insurance will continue to support any reasonable cost containment measures that are suggested by consumers, the legislature or the insurance industry as long as those measures do not compromise the quality of the product.

### TABLE OF CONTENTS

Homeowners Fair Access to Insurance Requirement (FAIR) Plan

Loss Ratios

Frequency, Severity, Pure Premium Trends

Market Share, Average Premium and Loss Ratio by Company

Average Premium

Experience and Distribution by Coverage Amount

Average Policy Amount Within Policy Type

Experience and Distribution of Policy Type

Experience by Homeowners Loss Type

Tabulation by Zip Code, by Policy Type of Exposures and Loss Types

### HOMEOWNERS INSURANCE

The information provided in this report has been compiled using the zip code data as reported under Section 374.400 RSMo and the Page 14 Supplement to the Annual Statement. Consequently, the accuracy of this report depends on the accuracy of each company's data.

The Missouri Department of Insurance has undertaken the task of collecting zip code data. At present time, companies or groups with more than 500 annual exposures must report totals of written premiums, written exposures, number of paid losses, and paid loss amount by zip code. The collection of zip code data allows the Missouri Department of Insurance to fulfill the following goals:

- To enchance fair competition among insurers of homeowners by providing market share in each zip code.
- To monitor the homeowners insurance cancellation practices of insurers in certain geographical areas.
- 3) To monitor the number of FAIR Plan exposures by geographical area.
- To test the validity of territorial classifications.

Any questions concerning this report should be addressed to the Statistical Section, Missouri Department of Insurance, PO Box 690, Jefferson City, MO 65102-0690.

### HOMEOWNERS FAIR ACCESS TO INSURANCE REQUIREMENT (FAIR) PLAN

The first table illustrates the total number and distribution of homes insured through the FAIR Plan for all zip codes, St Louis and Kansas City areas for 1983 through 1991. In addition, a by zip code report of the number of exposures and FAIR Plan exposures for the years 1991 and 1990 along with the increase or decrease percent of exposures.

### MISSOURI FAIR PLAN

### LOSS RATIOS

The following table and graph illustrate the homeowner insurance industry's loss ratios in Missouri for the last eleven years. The data reported on each company's Page 14 supplement for the year ending was used to compile this section.

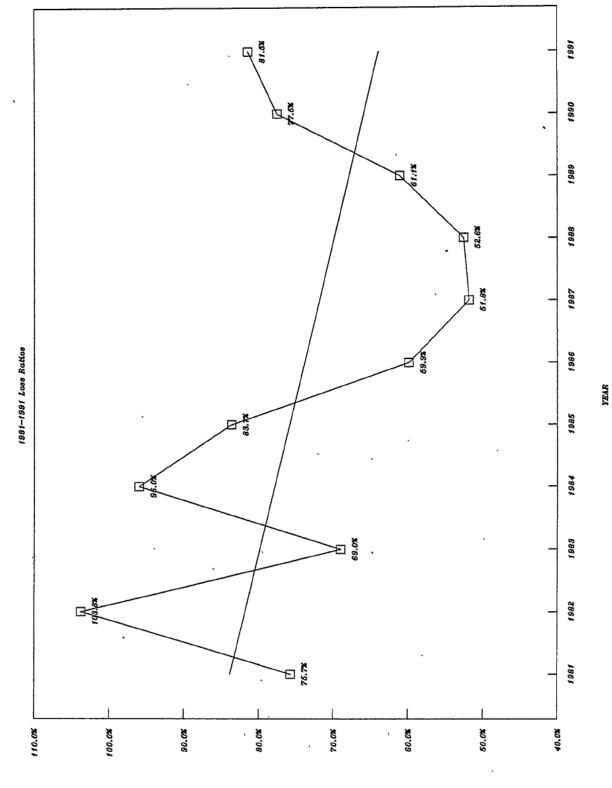

A loss ratio is a percentage arrived at by dividing the amount of the losses by the amount of the earned premium. It is that portion of the premium dollar that is actually paid back to insureds in losses. This ratio does not include loss adjustment or other administrative expenses.

### MISSOURI HOMEOWNERS

1981 - 1991 Loss Ratios

Written		Earned	Paid	Incurred	Loss	
Year	Premium	Premium	Losses	Losses	Ratio	
1981	Unavailable	205,289,388	Unavailable	155,489,312	75.7%

# MISSOURI HOMEOWNERS

### FREQUENCY, SEVERITY, PURE PREMIUM TRENDS

This table consists of annual trend data for 1989, 1990 and 1991. Frequency, Severity, Pure Premium and Average Premium figures are shown. The data in this table was obtained from the zip code reports filed annually with the Department.

The following defintions may aid individuals interested in this table:

Frequency - the number of claims paid per insured exposure.

Severity - average claim paid.

Pure Premium - Frequency \* Severity. Average loss cost per unit of exposure. No loading has been added for commissions, taxes, reserves and expenses.

Average Premium - Written premium divided by written exposures.

## MISSOURI HOMEOWNERS

Frequency and Severity

Year	Frequency (per 100)	% Change From Prior Year	Severity	% Change From Prior Year	Paid Pure Premium	% Change From Prior Year	Average Premium	% Change From Prior Year
1989	7.31	6.8%	1885.12	7.5%	137.89	14.8%	253.61	0.4%
1990	8.82	20.6%	1914.52	1.6%	168.83	22.4%	243.62	-3.9%
1991	10.62	20.4%	1771.88	-7.5%	188.13	11.4%	246.38	1.1%

#### MARKET SHARE, AVERAGE PREMIUM AND LOSS RATIO BY COMPANY

The following study contains the market share, average total premium and loss ratio by company for all major writers of homeowner's insurance in Missouri.

Many problems exist with the use of average premiums for relativity comparisons between companies. Some reasons for the differences in relative premiums exist because of geographical and demographical market concentration, age distribution of homes insured, income/wage carried, socio-economic factors, personal property theft and fraud, frequency of vandalism, home repair costs, and underwriting. This data can not be used to determine which company offers the lowest premium for an individual risk.

The data used in this report comes from the Page 14 Supplement to the Annual Statement and zip code reports filed annually with the Missouri Department of Insurance by the individual companies. The accuracy of this report is very much dependent on the accuracy of the companies filing the data.

The following definitions may be useful to those interested in this report:

Market Share - The percentage of the total Missouri homeowner written premium that a particular company writes.

Average Premium - Written premium divided by written exposures.

True Loss Ratio - The percentage of earned premium used and set aside to pay insured for claims. It does not include loss adjustment or any other administrative expenses that must also be paid out of the premiums collected.

NOTE: The Market Share and True Loss Ratio are calculated using the data reported on each company's Page 14 Supplement. The Premium Written is the amount written in all zip codes for each company which was also used to calculate the average premium.

#### AVERAGE PREMIUM

The following table contains the exposures written, premium written, the average premium, paid loss count and losses paid amount by zip code for the homeowners insurance industry in Missouri. Average premium is calculated by dividing the written premium by the written exposures for each zip code.

Many problems exist with the use of average premiums for relativity comparisons between zip codes. Some reasons for the differences in relative premiums exist because of varying geographical weather conditions, age distribution of homes, income/wage levels, types of houses insured, limits and deductibles carried, socio-economic factors, personal property theft and fraud, frequency of vandalism, home repair costs, and underwriting. This data can not be used to determine which zip code has the lowest premium for an individual risk.

The data used in this report comes from the zip code reports filed annually with the Missouri Department of Insurance by the individual companies. The accuracy of this report is very much dependent on the accuracy of the companies filing the data.

### EXPERIENCE AND DISTRIBUTION BY COVERAGE AMOUNT

The following pages contain pure premium and average premium figures for 1989, 1990 and 1991 by coverage amount limit for homeowners coverage. Also, included in this table is a distribution of business by coverage limit.

The following definitions may be useful to those interested in this report:

Pure Premium - Average loss cost unit of exposure. No loading has been added for commissions, taxes, reserves, and expenses.

3-Year Rating Factor - It is calculated by dividing the average pure premium for each range limit by the average pure premium for the base range limit. A measure of relative risk.

Average Premium - Written premium divided by written exposures.

Paid Loss Ratio - Also known as a cash flow loss ratio. Paid losses divided by written premium. This ratio does not take into account any reserves established for unearned premium or unpaid losses.

## MISSOURI HOMEOWNERS

Pure Premium and Average Premium by Range Limit

#### EXPERIENCE AND DISTRIBUTION OF POLICY TYPE

The following pages contain pure premium and average premium figures for 1989 through 1991 by policy type. Also included in this report is a distribution of business by policy type.

Policy types are defined as follows:

#### Forms 1, 2, 3 & 5

Basic policies carried by a "home owner" on the building and contents. This package includes fire, wind, theft and liability coverages.

#### Forms 4 & 6

Includes Tenants Insurance and Condominium Unit Owners Insurance like Forms 1, 2, 3 & 5 but for the contents only, or contents and inner walls only.

#### Dwelling Fire Forms 1-5

More limited, this insurance has no liability coverage or any theft . coverage unless paid for by additional premium. It may not cover contents or perils other than fire.

#### ISO Form 8

May include any policy similar to HO 1-3, with dwelling coverage based on actual cash value rather than replacement cost.

#### <u>Dwelling Fire (Surcharged)</u>

Any dwelling fire coverage written on a surcharged basis only.

The following definitions may be useful to individuals interested in this report:

Frequency - The number of claims paid per insured exposure.

Severity - The average paid claim. Does not include loss adjustment expense.

Pure Premium - Frequency \* Severity. Average loss cost per unit of exposure. No loading has been added for commissions, taxes, reserves and expenses.

Average Premium - Written premium divided by written exposures.
